

Minecraft Sleep Videos

Every kind of “fall asleep to Minecraft” video on YouTube, measured: which sub-genres win, which titles win, which lengths win, and which channels are pulling millions of views from under 3,000 subscribers.

Videos measured	In-genre after filtering	Channels	Catalogues dumped
3,500+	593	196	26

The verdict in 60 seconds

This is the most subscriber-independent niche on YouTube. The single best performer found is **BeforePhantoms** — **31,500 subscribers, median 5,369,237 views.** **That is 170× its own subscriber count**, with a best video at 9,849,851. Below it sits a whole cluster of channels under 4,000 subscribers pulling six figures a video.

Two title templates account for most of the small-channel wins. The **nostalgia POV** template (POV: it’s 2014 and you fell asleep playing Minecraft) and the **lowercase comfort** template (relax, everything will be okay...). Both are being copied, verbatim, by dozens of channels — and both still work.

But be honest about the odds. Across 99 long-form videos using the nostalgia template, the **median got 1,954 views and 60% got under 5,000**. One in four cleared 100,000. This is a cheap lottery ticket with an enormous jackpot, not a reliable income.

Silence beats talking, and there is a controlled test. InfiniteDrift publishes both styles to the same 307,000 subscribers: its “No Commentary” longplays median **257,000 views**, its narrated videos **28,000** — a **9.2×** gap from format alone. And **story-reading over Minecraft is the worst sub-genre measured**, median **9,436 views** against 261,300 for ambience.

01 · METHOD

What was measured

36 search queries aimed at every angle of Minecraft sleep content, then 26 full channel back-catalogues dumped video-by-video, then subscriber counts and upload dates pulled per channel and per video. Everything here is a

live-pulled number.

1,683

unique videos pulled with live view counts

593

genuinely Minecraft × sleep after filtering

196

distinct channels in the filtered set

26

channel catalogues dumped in full, ~2,500 further videos

THE FILTERING MATTERS MORE THAN USUAL HERE

Raw search for “minecraft rain sleep” returns a flood of generic rain-and-thunder channels that have nothing to do with Minecraft — **30% of raw results had no mention of Minecraft in the title at all**. Those were removed, along with high-energy gaming videos (100 Days, speedruns, cave-sound memes) that match on keywords but are not sleep content. The 593 that survived are the real genre.

TWO DIFFERENT MEDIANS APPEAR IN THIS REPORT — BOTH ARE TRUE

A **search median** is computed over videos YouTube surfaced, so it over-represents winners. A **catalogue median** is computed over everything a channel has ever posted, so it shows what a typical upload really gets. They differ wildly: Drift Away Ambience has a search median of **364,422** and a catalogue median of **62,000**. Both numbers are labelled wherever they appear. The catalogue median is the one to plan with.

02 · THE LEADERBOARD

The biggest Minecraft sleep videos on YouTube

Top 26 by view count, with real upload dates. Note how many are recent — this is not a niche coasting on old uploads.

UPLOADED	VIEWS	LENGTH	CHANNEL	TITLE
Aug 2020	22,186,377	10h00	NoobAlike	Minecraft Relaxing Music Box 10 Hours (Rain + Visuals)
Jul 2017	20,536,090	1h24	Ephemeral Rift	Sleep for the Sleepless ASMR

Aug 2024	3,076,198	3h00	Jojo's ASMR	99.99% of YOU will sleep to this ASMR

Upload dates pulled per video. Sub-genre is this report's classification.

THE NICHE IS ALIVE, NOT ARCHIVED

Six of the top 26 were uploaded in the last 24 months, and the **June 2025** Drift Away Ambience video at 17.2M is accumulating views faster than most of the 2020–2022 cohort. New entrants are still landing eight-figure videos. Compare that with the *nostalgia* sub-genre, whose top entries are all 2018–2019 — that template is older and more contested.

03 · SUB-GENRES

What kind of Minecraft sleep video wins

Every video in the filtered set was classified into a sub-genre by title. This is the central table of the report.

SUB-GENRE	N	MEDIAN VIEWS	MEAN	P90	MEDIAN LENGTH
Ambience / music — C418 + rain, no voice	151	261,300	1,113,234	2,563,848	8h19
Voiced commentary — “fall asleep while I play”	120	208,841	713,535	1,369,560	3h09
Nostalgia-framed — “it’s 2014 and you fell asleep…”	36	197,839	742,097	1,905,663	3h26
Other / mixed	53	196,307	530,339	1,280,973	1h56
ASMR	52	133,155	817,183	1,083,937	1h06
Facts / lore narration	34	119,299	575,829	1,296,248	2h01
Relaxing longplay / building, no commentary	44	88,358	301,224	869,514	3h15
Parkour used as wallpaper	18	14,597	112,062	426,348	1h52
Story / Reddit reading over Minecraft	85	9,436	212,818	760,284	3h01

593 Minecraft sleep/relax videos, classified by title. Search-surfaced medians.

THE TWO RESULTS THAT WILL SURPRISE YOU

- 1. **Parkour-as-wallpaper is a graveyard — median 14,597 views.** The endless-parkour background is the visual everyone associates with this content, and on its own it does not work. It is the *audio* people come for.
- 2. **Story reading over Minecraft is the worst of all — median 9,436.** It has a respectable p90 of 760,284, so the ceiling is real (babyjamie1 has a 2.2M video), but the typical attempt gets under ten thousand views. This is a 28× gap against ambience. If you are planning to talk over Minecraft, this is the number to take seriously.

CROSS-CHECK

A second, independently-built classification over 470 Minecraft-titled videos produced the same ordering at the bottom — story/Reddit reading last on **9,951** median — and put nostalgia (197,849), longplay (194,743) and ambience (180,235) in a near-tie at the top. Two different filters, same conclusion: **the wordless sub-genres beat the talking ones, and story-reading is last by a factor of about twenty.**

03B · CONTROLLED TESTS

Two experiments that remove channel size from the question

Cross-channel medians are always confounded — big channels get more views for reasons that have nothing to do with format. The only clean way to test a format is to compare videos *inside a single channel*. Two such tests exist in this data, and they point in opposite directions on the question that matters most.

TEST 1 — NO COMMENTARY BEATS COMMENTARY BY 9.2×
STRONGEST EVIDENCE IN THE REPORT

InfiniteDrift (307,000 subscribers) publishes both styles. Same channel, same subscribers, same thumbnail style — only the format differs.

FORMAT	VIDEOS	MEDIAN VIEWS
Explicitly “No Commentary” longplay	40	257,000
Narrated cozy builds and SMP episodes	156	28,000

A 9.2× gap from silence alone. A separate cross-channel comparison on an independent search pool put the same gap at 3.6× (no-commentary channels median 797,448 against voiced channels 222,846). So the effect is somewhere between roughly 3.6× and 9× depending on method — but every method agrees on the direction.

TEST 2 — PUTTING “SLEEP” IN THE TITLE IS NOT A UNIVERSAL LEVER

This is the counterweight, and it is important. **Egush** is the only channel with a large, balanced sample on both sides: 51 sleep-titled videos against 50 that are not. **The sleep-titled ones underperform by 28%** — median 39,000 against 54,500. Two smaller channels go the other way (Eider’s Movies **3.42×**, Vembo **1.86×**), so the honest read is that a literal sleep promise in the title is **channel-specific, not a guaranteed multiplier**. Contrast that with the previous report’s finding on MadMorph, where the framing was worth 5.6× — that held across 200 videos on a channel whose *entire identity* is the sleep format. The framing works when it is the whole proposition, not when it is bolted on.

TWO LABELLING ERRORS WORTH KNOWING ABOUT, FOUND WHILE CHECKING

aCookieGod is not a sleep channel. With 8.09M subscribers, its median video is 5,600,000 views and its top 20 are all “100 Days” hardcore challenges. Its “1 hour of minecraft facts to help you sleep” got 7,704,825 — only **1.38×** its own normal median. It is a mainstream Minecraft channel whose long videos happen to get used as sleep content, not evidence that the sleep format scales.

“Caddy Sleeps” contains no Minecraft at all — it is repackaged Caddicarus retro-gaming commentary. Zero of 50 videos mention Minecraft. Name-matching is not format-matching in this niche.

04 · THE OUTLIERS

Tiny channels beating enormous ones

This is the striking part. Ranked by **median views divided by subscriber count** — the measure of how far a channel punches above its size.

CHANNEL	SUBS	N	MEDIAN VIEWS	BEST VIDEO	VIEWS PER SUB
BeforePhantoms	31,500	3	5,369,237	9,849,851	170×
Sleepy Drifter	3,170	4	422,341	743,271	133×
Subwoofer Lullabies	1,800	3	172,339	250,735	96×
Stains	2,420	5	220,865	458,429	91×
Faded Memories	1,660	3	111,249	122,662	67×
Daydream Exchange	3,650	3	207,159	616,250	57×
Vibe Nights x Minecraft	2,520	3	68,927	574,773	27×
Darkcraft Dreams	2,730	5	59,468	236,765	22×
Cinematic Player	13,000	4	262,561	742,275	20×
Eider's Movies	20,100	5	275,227	607,499	14×
InfiniteDrift	307,000	7	3,082,639	13,665,228	10×
WaxFraud	430,000	3	3,507,805	4,767,208	8×
Loopy Longplays	188,000	7	979,003	1,379,154	5×
babyjamie1	307,000	13	1,144,913	2,239,150	4×
CottonVelvet	90,600	14	307,378	1,778,394	3×
Drift Away Ambience	284,000	52	364,422	17,234,888	1.3×
CozyCraft	117,000	19	159,951	5,294,637	1.4×
MadMorph	851,000	38	326,882	3,398,494	0.4×
Minecraft (official)	22,600,000	5	1,800,643	4,606,150	0.08×
iDeactivateMC	1,670,000	13	115,363	304,067	0.07×

Subscriber counts pulled live per channel. Search-surfaced medians, minimum 3 videos in the set.

WHAT THIS TABLE ACTUALLY PROVES

Subscribers do not drive views in this niche. Minecraft's own official channel — 22.6 million subscribers — gets 0.08 views per subscriber on its sleep content. A 1,800-subscriber channel called Subwoofer Lullabies gets 96. The traffic comes from **search and suggested**, where the title and thumbnail are the entire pitch and nobody can see how big you are. That is why a brand-new channel is not meaningfully behind here.

AND THE OTHER HALF OF THE TABLE, WHICH NOBODY SCREENSHOTS

The same sweep found channels of identical size getting nothing: **Dreamy Sleep Cozy** (1,110 subs, median **187** views across 14 videos), **Sleepy Ambience** (1,310 subs, median **399**), **The Red Bed** (1,490 subs, median **4,532**), and two channels whose median across the sample was literally **0 and 1 views**. Small channels in this niche either hit or score nothing at all. There is very little middle.

05 · THE TEMPLATES

Two title formulas doing most of the work

Template 1 — the nostalgia POV

POV: it's 2014 and you fell asleep playing Minecraft

67 different channels are running this. It is copied nearly word-for-word, with the year and the setting swapped. The results, and the price of entry:

CHANNEL	SUBS	VIEWS	LENGTH	TITLE
isaacwhy	—	4,700,789	1h00	you fell asleep with minecraft open on a cool 2012 mid-summer night
Chilled Fox	—	3,600,247	1h01	it's 2014 and you fell asleep playing minecraft over christmas break
liwla	—	1,286,718	0h59	it's 2014 and you fell asleep playing minecraft
Last Lantern	—	1,112,039	1h25	POV : It's 2014 and you fell asleep playing minecraft
Sleepy Drifter	3,170	743,278	4h00	POV : It's 2014 and you fell asleep playing minecraft
Sleepy Drifter	3,170	657,745	3h59	wake up bro, it's 2014...
BlocksCozy	—	528,299	0h22	it's 2014 and you fell asleep playing minecraft
Ambience Crafting	—	496,317	4h12	POV : You Fell Asleep In 2012 Minecraft
Stains	2,420	458,639	4h04	POV: You fell asleep in 2014 and everything is okay again
Ambient Crafts	54,700	446,283	1h54	it's 2014 and you fell asleep playing minecraft with your best friend.
jankler	—	331,652	1h00	wake up bro, it's 2013
Subwoofer Lullabies	1,800	250,752	2h48	POV: it's 2014 and you open minecraft on a rainy morning...
Stains	2,420	239,565	3h53	POV: You fell asleep in 2014 playing Minecraft on a snowy night
Subwoofer Lullabies	1,800	231,582	3h17	go to sleep bro, it's 2014 again...
Faded Memories	1,660	122,662	4h00	pov: you fell asleep in old minecraft

Long-form (20 min+) videos using the nostalgia template. The short "bro wake up it's 2014" meme clips are excluded — different format.

THE TEMPLATE'S REAL ODDS READ THIS BEFORE COPYING IT

Across **99 long-form videos** using this template: median **1,954 views**. **60% got under 5,000 views**. **25% cleared 100,000**. Ambience Crafting posted eight of them — one hit 496,317, the other seven have a median of **854**. Darkcraft Dreams posted one and got **1,213**. The template is not magic; it is a cheap ticket in a lottery whose jackpot is enormous. **The one clear signal in the data: the 20–60 minute versions have a median of 72,746 against 642 for the 2–4 hour ones**. Shorter, better-made entries win.

Template 2 — the lowercase comfort line

The other winning shape has no Minecraft reference in the title at all — just a quiet second-person sentence with a trailing ellipsis, and the Minecraft detail in brackets.

The winners

- all of a sudden, everything becomes alright...
18,000,000 — Ambient Crafts (54,700 subs)
- no more thinking tonight... (minecraft music w/ soft rain)
17,234,888 — Drift Away Ambience
- relax, everything will be okay...
9,849,851 — BeforePhantoms (31,500 subs)
- tomorrow, you'll feel better...
5,741,402 — Drift Away Ambience
- some peace for hard nights...
4,723,511 — Drift Away Ambience
- those were the days.
3,290,712 — ambient craft
- stop thinking for a moment...
3,117,115 — Drift Away Ambience
- why are you still awake?..
1,300,000 — Drift Away Ambience

The rules of the shape

- **All lowercase.** Every single one.
- **Trailing ellipsis** — the sentence trails off, like the viewer is already drifting.
- **Second person, reassuring.** It talks to someone having a bad night: *you'll feel better, everything will be okay, you need it.*
- **No hype words, no numbers, no caps, no clickbait.**
- **The Minecraft detail lives in brackets** at the end, doing the SEO job the title itself refuses to do.

This is the strongest packaging pattern found in the entire dataset, and unlike the nostalgia template it is still producing eight-figure videos in 2025.

05B · PACKAGING

Which title words actually correlate with views

Measured across 473 videos that genuinely say “Minecraft” in the title — the generic rain mega-channels were stripped out first, because they otherwise make thunder and black-screen look like winners when they are just a different business.

TITLE FEATURE	N	LIFT	READ
Lowercase-only title	118	2.46×	The strongest signal, on a large sample. Use it.
Comfort / reassurance phrasing	12	2.37×	Confounded — only two channels
The word “rain”	91	2.11×	Broad sample, genuinely predictive
Trailing “...”	7	1.59×	Right direction, sample too small to lean on
Second person (“you”, “your”)	95	1.26×	Mild positive
Nostalgia framing	33	1.19×	Mild positive
cave / cozy / fireplace / ASMR	13–56	1.05–1.16×	Neutral
thunder / black screen	8–14	0.90×	Neutral-to-negative <i>inside</i> Minecraft content
C418 named / “soundtrack” / “longplay”	27–88	0.69–0.75×	Slight penalty
The word “sleep”, “relaxing”, “N Hours”, Title Case	139–277	0.40–0.54×	Real penalty, large samples
ALL CAPS, or “parkour”	4–18	0.10–0.14×	Worst features measured

Lift = median views WITH the feature ÷ median views WITHOUT it. 473 Minecraft-titled videos.

THE COUNTER-INTUITIVE RESULT, STATED PLAINLY

Inside genuine Minecraft sleep content, **literally saying “sleep”, “relaxing” or “10 Hours” in the title correlates with roughly half the views**, and Title Case does too. The winners are understated lowercase diary sentences. Some of this is confounding — the channels confident enough to write a quiet title tend to be the better ones — but the direction is consistent with everything else in this report, and it lines up exactly with the comfort template in §05. **Write the title like a thought, not like a product listing.**

The thumbnail convention

The top 20 Minecraft-titled videos’ thumbnails were downloaded and looked at directly. The convention is tight and it is nothing like standard YouTube advice.

70%

show an in-game Minecraft render

5%

contain a human face — 19 of 20 have none

70%

dark / night-coded

65%

carry text, almost always 3 words or fewer

Recurring motifs, counted: **cozy cabin structure 45%**, **fireplace or campfire 40%**, **Minecraft logo lockup 25%** (only on the branded-longplay family), **visible bed 20%**, **rain on window 20%**, starry night sky 15%, cave-with-glowing-eyes 15%, axolotls 10%. The dominant colour scheme is **warm amber firelight against dark navy or black**. There are no bright or pastel thumbnails anywhere in the winning set.

THE THUMBNAIL SPEC

An in-game **cozy cabin render with a fireplace, a window and ideally a bed in frame**. Night-coded: one or two warm light sources against dark surroundings. Optional **1–3 word lowercase caption in a chunky pixel font**, white fill with a black outline — a mood phrase (“quiet night”, “nostalgia”), never a literal description of the contents. **No human face. No ALL CAPS. No pure black screen. No reaction collage.** The restraint is the genre signal.

06 · LENGTH

How long these videos run

LENGTH	N	MEDIAN VIEWS	MEAN	P90
Under 30 min	21	51,614	248,909	426,408
30–60 min	53	179,420	540,072	1,250,850
1–2 h	118	124,856	828,205	2,444,655
2–3 h	81	238,620	582,746	1,149,716
3–5 h	85	129,779	817,739	2,359,647
5–8 h	75	44,886	723,559	1,642,169
8–12 h	155	174,773	631,326	1,369,560
12 h+	5	979,003	713,293	1,094,072

593 Minecraft sleep videos by duration. Search-surfaced medians.

Two shapes work and the valley between them does not. **2–3 hours is the best bucket with a real sample** (238,620 across 81 videos). **8–12 hours** is the other cluster — that is the wordless ambience business, where the pitch is “this will outlast the night”. The **5–8 hour** band is the worst of both: too long to be a session, not long enough to be the whole night. The 12h+ figure sits on five videos and should be ignored.

WHICH LENGTH GOES WITH WHICH SUB-GENRE

Ambience runs a median of **8h19**. Voiced commentary runs **3h09**. Nostalgia runs **3h26**. Nobody talks for eight hours and nobody puts a silent music loop out at ninety minutes — **the length is a property of the format, not a free choice**. Pick the format first.

07 · REALITY CHECK

What a typical upload actually gets

Twenty-six channels were dumped in full; the nine largest are shown here — every video they have ever posted, not just the ones search surfaced. These catalogue medians are the honest picture, and they are brutal.

CHANNEL	SUBS	VIDEOS	CATALOGUE MEDIAN	BEST VIDEO	BEST ÷ MEDIAN
Ambient Crafts	54,700	189	921	18,000,000	19,544×
NoobAlike	42,200	45	2,600	22,000,000	8,462×
Sleepy Jeico	5,090	45	1,500	3,000,000	2,000×
BeforePhantoms	31,500	27	15,000	9,800,000	653×
Sky chill	15,900	29	5,600	2,200,000	393×
Cozy Bed	35,800	200	3,400	375,000	110×
CozyCraft	117,000	182	40,500	2,700,000	67×
Drift Away Ambience	284,000	189	62,000	3,100,000	50×
CottonVelvet	90,600	31	184,000	1,700,000	9×

Full catalogue dumps. “Median” here is across everything the channel has posted.

THE SHAPE OF THIS BUSINESS

Ambient Crafts has 189 videos with a median of 921 views — and one video with 18 million. That is not a typo, and it is the defining fact of the niche. These channels are volume machines: they post constantly, almost everything dies, and once or twice a year something detonates and carries the channel. **CottonVelvet is the exception** — 31 videos, a 184,000 median and only a 9× spread, which is what a consistent, well-executed longplay catalogue looks like.

Plan for the Ambient Crafts distribution, not the CottonVelvet one, unless you can genuinely produce at CottonVelvet’s quality.

The C418 copyright problem

VERIFIED, AND IT HITS THE BEST-PERFORMING SUB-GENRE REAL INCIDENT

The ambience sub-genre — the highest median in this report — runs almost entirely on C418's Minecraft soundtrack. In **October 2024, Warner Chappell filed Content ID claims against C418 tracks it does not own**, including *Mice on Venus*. Real creators were hit, including Mumbo Jumbo. **C418 responded publicly and helped creators contest the claims**, so the claims were false positives rather than a legitimate rights holder acting — but the practical effect on a channel whose entire catalogue is C418 is the same: claimed videos, redirected revenue, and an appeals process.

What that means in practice. Mojang's usage guidelines do permit monetised use of official Minecraft music in game-related content, so you are within the rules. But being within the rules is not the same as being safe from an automated claim, and a channel running eight-hour C418 loops has enormous exposure per upload. The channels doing this at scale accept that risk as a cost of business. **If you want the niche without the exposure, the voiced and longplay sub-genres do not depend on the soundtrack** — turn the in-game music off and the risk goes with it.

NOT VERIFIED

No Mojang or Microsoft statement on this content trend could be found, and no authoritative origin date for the "you fell asleep playing Minecraft" format as a named phenomenon. Treated as unknown, not as confirmed absence.

Why this game owns the sleep niche

Three explanations hold up to sourcing, and they compound.

1. The soundtrack was built for this

C418's score was composed as deliberately ambient, lullaby-adjacent music — sparse piano, no percussion, no resolution. For a generation it is also the sound of being eleven years old. That is a nostalgia trigger and a sleep aid in the same file, which is why videos can be titled purely as emotional comfort and still rank.

2. The worlds read as liminal space

Blocky, low-detail, empty, softly lit. Minecraft landscapes map directly onto the documented "liminal space" and dreamcore comfort aesthetics — places that feel familiar and unpeopled at once. It is a visual with nothing in it to snag attention, which is exactly the requirement.

3. Low-stimulation background media is a documented sleep and focus aid

Background noise and low-arousal video are an established coping tool for anxiety and ADHD — occupying the part of the mind that would otherwise race. Minecraft sleep content rides on top of an existing behaviour rather than inventing one, which is why the audience is already there and does not need converting. It also explains the second-person comfort titles: they speak directly to someone lying awake.

10 · WHAT TO DO

If you want to compete in this

THE RANKED OPTIONS, BY EVIDENCE

1. **Lowercase comfort ambience (8–12 h).** Highest median in the dataset (261,300), still producing eight-figure videos in 2025, near-zero production cost, and it collects every positive title signal at once — lowercase, rain, second person, no hype. Downside: the C418 exposure and a catalogue median that can sit under 1,000 views for a long time.
2. **Relaxing longplay, no commentary (2–5 h).** Promoted on the strength of the controlled test — **9.2× over narrated video on the same channel.** Its cross-channel median looks low (88,358) only because dozens of tiny channels dilute the pool. CottonVelvet shows what a consistent catalogue looks like here: 31 videos, 184,000 median, best-to-median spread of only 9×. No soundtrack risk if you use your own audio.
3. **Voiced “fall asleep while I play” (2–3 h).** Strong cross-channel median (208,841) and the most defensible long term — a voice cannot be cloned by the next 67 channels. But be clear-eyed: both controlled tests in this report say a voice costs views in the short run. You are trading immediate reach for an audience that actually belongs to you.
4. **Nostalgia POV (20–60 min).** Cheap and occasionally explosive, but 60% get under 5,000 views and the top of the format is 2018–2019. Worth one attempt at the shorter length, not a strategy.

IF YOU GO VOICED ANYWAY, THE DATA SAYS HOW

Commentate on the game, do not read at it. The 208,841 bucket is people narrating what is happening on screen; the 9,436 bucket is people reading unrelated stories over footage. Same visual, same voice, a 22× difference. Keep the game as the subject of the talk, not the wallpaper behind it. And write the title as a quiet lowercase sentence regardless — the packaging rules in §05b apply to every sub-genre.

WHAT THE DATA SAYS NOT TO DO

Do not build on story-reading over Minecraft footage (median 9,436) or on **parkour-as-wallpaper** (median 14,597). Both look like the obvious move and both are the two worst-performing sub-genres measured. If the plan involves talking, the evidence points at commentary on *what is happening in the game* rather than reading unrelated stories over it — that is the difference between the 208,841 bucket and the 9,436 one.

THE ONE LINE TO TAKE AWAY

A 1,800-subscriber channel is getting 96 views per subscriber in this niche while Minecraft's own 22.6-million-subscriber channel gets 0.08. **Nothing about your size is holding you back here.** The title, the length and the sub-genre are doing essentially all of the work — and this report tells you what all three should be.

Sources & confidence. All view counts, durations, subscriber counts and upload dates were pulled live from YouTube on 4 September 2026 — 1,683 unique videos across 36 targeted search queries, filtered to 593 genuinely in-genre, plus full catalogue dumps of 26 leading channels (around 2,500 further videos). Sub-genre classification is by title keyword and is stated as such; a second, independently-built classification over a different filtered set is reported alongside it as a cross-check. Search-surfaced medians over-represent successful videos and are labelled distinctly from catalogue medians throughout. The C418 Content ID incident is sourced to contemporaneous reporting and C418's own public response. Items stated as unverified could not be confirmed against a primary source and are flagged rather than presented as fact.
